ToolShare

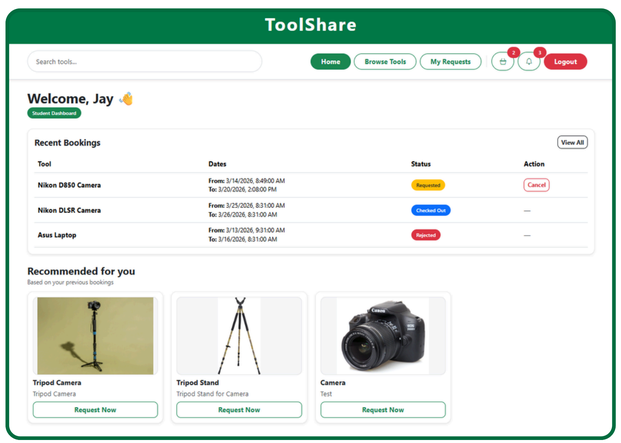
University Equipment Sharing Platform

Jay Patel & Isaac Kydd

PROJECT IDEA

- ToolShare is a centralized web-based platform designed to simplify the process of borrowing and managing shared tools within universities.
- The system allows users to browse available tools, submit requests, and track their bookings in real time.
- Administrators can efficiently manage approvals, monitor usage, and maintain inventory.
- By digitizing the entire workflow, ToolShare reduces manual errors, improves accessibility, and enhances overall efficiency in tool management.

Student View



HOW EVERYONE BENEFITS

- Helps universities & students get the most out of their equipment, which is often very expensive.
- Reduces waste from universities by making students more aware of resources that already exist.
- Allows departments to easily track who has what, when it is coming back, and the reasons students want their equipment.

WHAT WE MADE

- Status of items is updated in real-time, allowing users to see if an item is available, booked, under repair, etc.
- Ensured secure access & authentication using JWT token.
- Students and Faculty members can view and borrow items quickly and easily.
- Can see real-time status of tools using MySQL.
- Deployed on AWS for scalable and accessible usage.
